## Test Verification of Conformity

On the basis of the tests undertaken, the samples(s) of the below product have been found to comply with the essential requirements of the referenced specifications at the time of the tests were carried out.

Applicant Name & Address : GLOBAL YEOU DIANN ELECTRIC INDUSTRIAL CO.,LTD.  
No.378,Kaisyuan 4<sup>th</sup> Rd., Cianjhen District, Kaohsiung City  
806, Taiwan

Product(s) Tested : SWITCHING ADAPTER  
Brand name : AMIGO

Ratings and principal Characteristics : Input: 100-240VAC, 50/60Hz, 1.2A  
Output: 12Vdc, 2.0A

Model(s) : AMS241A-1202000FV, AMS241A-1202000FB,  
AMS241A-1202000F, AMS241A-1202000FF,

#### Test program and conditions:

1. All tests was carried out in a room with an air speed immediately surrounding the UUT of  $\leq 0.5$  m/s.
2. The ambient temperature was maintained at 25 °C throughout the test.
3. Measurements were mode for supply voltage of 115V/60Hz and 230V/50Hz.
4. The load conditions specified in Table 1 shall be achieved by using a resistive load. The resistive load may be a variable resistor, an electronic test load, or a combination thereof, having a power factor of 0.95 to 1. When an electronic load is used, the constant current mode is used.
5. Test set-up according following figure 1.

Figure 1

#### 6. Testing sequence:

The tests shall be conducted as follows:

- a) Using the set-up in figure 1 apply load condition as specified in Table 1.
- b) The output of the EPS shall be maintained at load condition 1 for at least 30 minutes, this is the warm-up period. After this warm-up period the AC input power is monitored for a period of 5 minutes to assess stability. If the input power level does not change by more than 5% during these 5 min the measurement is considered to be stable and the measurements are recorded at the end of the 5 minute period. If the AC input power is not stable over a 5 minute period, stability shall be determined in accordance with EN 50564:2011, 5.3. If load condition 1 cannot be maintained for either warm-up period or the stability period then compliance with this standard cannot be determined.

- c) Immediately subsequent to b) load conditions 2 through 5 are measured in sequence each with a 5 minute period for determining stability. If is not necessary to repeat the warm-up period unless the EPS is not stable within each of the 5 minute periods. If AC input is not stable over a 5 minute period, stability shall be determined in accordance with EN 50564:2011, 5.3. When it is not possible to immediately follow the preceding test condition a warm-up period of at least 30 min shall be introduced using the relevant load condition.
- d) If the external power supply has a user-selectable output voltage, the above sequence is conducted first with the highest output voltage setting and then the sequence is repeated with the lowest voltage setting.
7. Power consumption of the UUT at each Load Condition 1-5 is the difference between the DC output power (W) at that Load Condition and the AC input power (W) at that Load Condition. The power consumption of Load Condition 6 (no load) is equal to the AC input power (W) at that Load Condition.

Loading Condition 1	100% of Derated Nameplate Output Current $\pm 2\%$ .
Loading Condition 2	75% of Derated Nameplate Output Current $\pm 2\%$ .
Loading Condition 3	50% of Derated Nameplate Output Current $\pm 2\%$ .
Loading Condition 4	25% of Derated Nameplate Output Current $\pm 2\%$ .

Note:

Single-voltage external AC-DC power supply means an external power supply that is designed to convert line voltage AC into lower-voltage DC output and is able to convert to only one DC output voltage at a time.

Single-voltage external AC-AC power supply means an external power supply that is designed to convert line voltage AC into lower-voltage AC output and is able to convert to only one AC output voltage at a time.

Low-voltage external power supply means an external power supply with a nameplate output voltage less than 6 volts and nameplate output current greater than or equal to 550 milliamps. Basic-voltage external power supply means an external power supply that is not a low-voltage power supply.
